

Accuracy · Speed · Efficiency

What does it do

SuperReco™ is a powerful stand-alone recognition product. It achieves a reco rate of over 80% with a substitution rate of under 1%. It takes data and image feeds from any capture system, updates the data string with the reco results, and places the string into your main application (e.g. CPCS).

How does it work

SuperReco™ uses the award-winning A2iA 'Checkreader' reco engine, and can be attached to one or several workflows. It is designed specifically to ensure that you do not need to change your capture, repair or balancing platform. SuperReco™ 'turbo-charges' your existing investment by routing the images out to the new SuperReco™ server before passing them back to the original application.

Who is it for

SuperReco™ is designed for banks that prefer a modular approach to building their image processing solution. A stand-alone reco solution is ideal for banks who want a best-of-breed reco system, while retaining the option to select or write their own image repair and balancing modules.

Intuitive Reco Interface

Benefits

- It lets you implement and prove your reco system without committing you to a specific vendor solution for downstream processes.
- Its unique stand-alone design means that it can be attached to remote deposit, central processing, or back-office systems.
- SuperReco™ can work with any repair or balancing application - including in-house written or existing systems

Proof

SuperReco™ has been tested with work from several major clearing banks. The results have been exceptional. Why not ask us to arrange a test with your own items? There is no better way to prove that it will work for you. The test takes between 1 and 2 days on site, and provides detailed results for input into your business case.
